CONTENTS

Physics, biophysics and ecology of soils

Accounting on agro-landscape peculiarities when conducting agroecological monitoring
Kirsanov A. D., Komarov A. A. 1

Soil cover changes during the period between surveys (1992–2021) on the example of the land site of the Udmurt Research Institute of Agriculture
Lednev A. V., Kudryavtsev I. M. 7

Physical, physiological and genetic basis for biological production of soil-plant complexes under natural and controlled conditions

The character of impact of mutant genes on the manifestation of breeding valuable traits in tomato
Makovey M. D. 13

Physical, physiological and genetic basis for biological production of soil-plant complexes under natural and controlled conditions

Influence of nitrogen fertilizers on soil nitrogen regime, growth and production processes of spring wheat
Bakaeva N. P., Saltykova O. L., Nechaeva E. Kh. 20

Soil fertility monitoring in the Iglinsky district of the Republic of Bashkortostan
Kiseleva A. A., Kurmasheva N. G., Asylbaev I. G., Khasanov A.N. 28

Improvement of spring wheat cultivation technology in conditions of Krasnoyarsk forest-steppe
Kurachenko N. L., Zakharenko K. A., Sharapatova A. V. 33

Content and distribution of exchangeable magnesium in the profile of sod-podzolic sandy loam soil reclaimed with dolomite screening fractions of different size
Manakov P. S., Litvinovich A. V., Lavrishchev A. V., Bure V. M. 40

Chronicles

Agrophysical Research Institute 90th anniversary
