The results of large-scale soil survey of the Menkovo Research Station of the Agrophysical Research Institute are being presented in the paper. The “profile-genetic” classification of Russian soils was used for the soil description and classification.

The large-scale map has been produced with soil and sub-soil genetic types and sub-types for the whole area of the Menkovo Research Station. The scale of the map is 1:7500. The paper also presents the main steps for the large-scale soil mapping.

**Keywords:** large-scale soil mapping, soil map, soil types and sub-types.
